SUMMARY

Seeking an intern software engineer position starting from June 2025. Computer Science student with 3 years of project experience in various areas, including web development, machine learning, mobile development. Strong knowledge of computer science, mathematics and statistics, and solid programming skills in Java, MySQL, JavaScript, Python, hands-on experience with Spring, AWS, React, Node.js, Ant Design.

EDUCATION

University Of Wisconsin Madison, Madison, Wisconsin *September 2024-July 2026(Expected)*

Bachelor of Science in Computer Science

- Courses: Object-Oriented Programming, Introduction to Computer Engineering, Introduction to Optimization, Machine Organization and Programming, Introduction to Discrete Mathematics

Guangdong University Of Finance & Economics, Guangzhou, Guangdong **GPA:3.99** *September 2022-July 2024*

Bachelor of Science in Software Engineering

- Courses: Linear Algebra and Linear Differential Equations, Object Oriented Design, Database Principle, Web Development Technology and UI interface design, VR Technology Basis

WORK EXPERIENCE

RASTAR GAMES

Guangzhou, China

The server-side developer Intern

August 2023-October 2023

- Wrote web games with Vue2/3 on prototype games that the team had created, maintained existing game webpages and repaired bugs, and learned about the work content and requirement of the game industry.

ZHONGXU Group

Guangzhou, China

H5 Frontend Engineer intern

December 2024-January 2025

- In this role, my primary responsibilities include interpreting the interface design documents provided by the planning team and implementing and initializing components within the Egret Wing game engine. Subsequently, I use TypeScript to write scripts, progressively realizing the functionality of each component as outlined in the design.

Look Took

Remote

Software development Intern

February 2025-Present

- Based on the React framework, develop relevant pages and features for the LookTook e-commerce app according to the functionality and page design requirements from the design department.

ACADEMIC PROJECTS

Visual Teaching Tool Research Program

October 2022-July 2023

Assisted university Professor Chaoyang Xiang in building animation models through 3Dmax software and Unity, adding scripts written in C# to the models, and completing visual teaching tools. The teaching tools I designed with Prof Xiang were employed in teaching by our university and contributed to help our university win 1st Prize in Guangzhou Teaching Competition

PROJECTS

Online Order: A Spring Boot based online food ordering system

Lead Developer and Designer

January 2024-May 2024

- Developed **CRUD REST APIs** using Spring Controllers, encompassing functionalities such as registration, menu searching, ordering, and checkout.
- Leveraged **Spring Data JDBC** and repositories to interface with a PostgreSQL database hosted on AWS RDS, handling data related to menus, restaurants, and more.
- Implemented application authentication via **Spring Security**, employing session-based authentication mechanisms.
- Architected the project with a clear separation of concerns into controller, service, and repository layers, utilizing dependency injection for enhanced maintainability.
- Constructed the frontend using **ReactJS** and Ant Design, providing users with the ability to seamlessly add items to their shopping cart and place orders.
- Containerized the build and pushed image to **AWS ECR**, successfully deployed it to AWS App Runner for streamlined scalability and accessibility.

Next AI: Full-Stack Web-Based Q&A AI Agent for PDF Document Queries

Lead Developer and Designer

January 2024-March 2024

- Engineering an interactive conversation UI leveraging **React** and **Ant Design**, enabling users to effortlessly upload and interact with PDF documents in real-time.

- Architected and implemented **RESTful APIs** via Express and **Node.js**, optimized for high-performance request handling.
- Utilized a memory vector store to cache generated embeddings for efficient retrieval.
- Integrated **OpenAI's GPT-3 5 Turbo API** and **Langchain** technologies, resulting in a sophisticated AI Agent capable of document loading, splitting, storage, retrieval, and output functionalities.

Social AI: an AI based Social Network

Lead Developer and Designer *April 2024-June 2024*

Frontend

- Designed and implemented a social network web application with **React JS**.
- Used **OpenAI's Dall-E3** to assist users to create and update posts.
- Improved the authentication using token based registration/login/logout flow with **React Router v4** and server-side user authentication with **JWT**.

Backend

- Launched a scalable web service in **Go** to handle posts and deployed to Google Cloud (Google App Engine)
- Used ElasticSearch (deployed to GCE) to provide search functions such that users can search recent posts and list personal posts.

MiniSpotify: A Personalized Spotify Favorite Management App

Lead Developer and Designer *February 2024-May 2024*

- Designed a **Kotlin** Spotify favorite app by fully leveraging **Android Jetpack Library** and **Hilt Dependency Injection**.
- Implemented the BottomBar & App Navigation using **Jetpack Navigation component**.
- Created a mock **RESTFUL** Api **json-server** and used the Retrofit to handle requests.
- Built the feed/album/favorite UI in **Jetpack Compose** following **MVVM** architecture.
- Enabled the local cache ability for favorite feature by using **Room Database**.
- Integrated the **Google Exoplayer** to handle the global music playback.
